

*BioVision and NanoLive present:*

## **3D CELL EXPLORER Workshop**

University of California, Davis  
South Campus  
December 9<sup>th</sup>, 2016

Cellular & Molecular Imaging, Room 514  
CHE Building on Old Davis Road  
10:00<sup>AM</sup> - 12:00<sup>PM</sup>

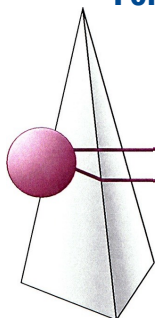

The **3D Cell Explorer** is a non-invasive microscope that can image cells & tissues *in vitro* instantly and in 3D without any stain or label. Through a combination of holography and rotational scanning the system measures precisely the distribution of the physical refractive index within the cell.

Join us for an interactive workshop to learn more about the exciting new technique.

Please RSVP to [pcedwards@ucdavis.edu](mailto:pcedwards@ucdavis.edu)
